

This Year's Action Plan

Farm Security & Access Control module — priorities proposed by the team this week to close the gaps identified in last year's project review.

| CRITICAL | IMPORTANT | NICE TO HAVE

What You Need to Improve This Year

Eight actions proposed by the team this week, grouped by priority and carried forward from last year's review.

CRITICAL — blocks implementation

 **Fill in all financial figures with real cost estimates**

 **Design a Security Master Plan**
Perimeter map, camera zones, and entry points.

 **Add night security**
Lighting, night-mode cameras, and patrol scheduling.

IMPORTANT — strengthens the plan

 **Define backup power for security systems**
Solar battery failover.

 **Create incident reporting templates and escalation procedures**

 **Coordinate with the No-Reesa team**
Link visitor flow with access control.

NICE TO HAVE — adds polish

 **Add sensitivity analysis**
E.g. what if theft reduction is 30% versus 60%?

 **Include a community engagement strategy**
To reduce external threat risk.

Together, these eight actions turn last year's well-structured idea into a plan that could actually be built on the ground.
